

BG Tools Quick Start

Please note: This software is only for Boly Inc. camera models – MG982K, MG983G, SG880MK-8MHD, and MG882K-8MHD.

1. Retrieve the application for your respective phone:
 - a. Android users can download the application from our website at www.bolymedia.com
 - b. Apple users can download the application from the Apple Apps store – search for BGTools.
2. Open the BG tools application and choose the camera model from the displayed list.
3. Add a new device camera name and SIM number
 - a. The Device Camera name can be anything unique to help you identify the specific camera, if you set up multiple cameras.
 - b. The SIM number is the phone number of the SIM card that is inserted into the camera.
4. Enter the Super SIM and password
 - a. The Super SIM is the phone number that will be communicating with the camera remotely. Note: Only one remote device (phone) can control the camera remotely. The Super SIM is NOT the phone number of the SIM card that is inserted into the camera.
 - b. The password is either 0000 or 5555 – This is the password that allows access to send/receive remote commands.
5. Enter the Operator (or Service carrier/provider)
 - a. From the list provided, select your country and service provider of the SIM card that is inserted into the camera.
6. Once the device is added to the application, you can check the camera's sending parameters by pressing the associated Control button on the right hand side in the application.
 - a. Check the **Phone** and **Email** options for verification to what phone number and email address images and responses from the camera are sent to.
 - b. To change camera settings remotely, select the **Work Parameter** option to access the programmed setting on the camera. Once done with the changes, press **Send** to remotely save the settings to the camera.
