

SC-DV10 CamManager Download and Setup Instructions

1. Download CamManager from the following link
<http://stuntcams.com/shop/resources/CamManager.zip>

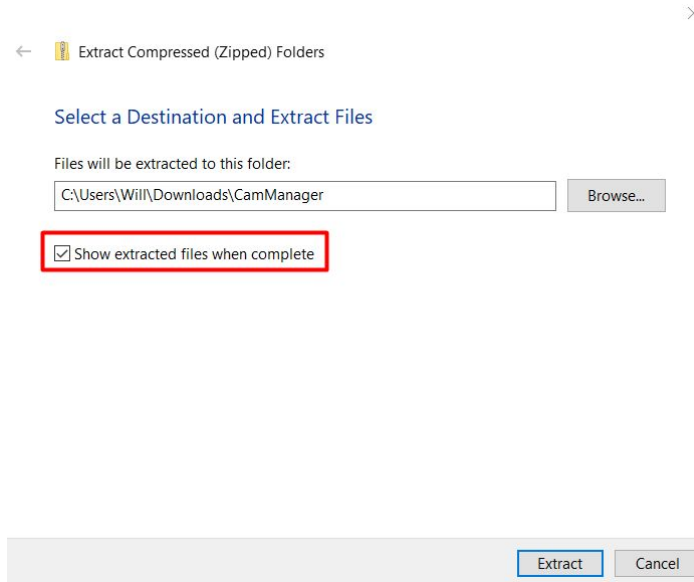

2. After the download is complete, navigate to your downloads folder.

3. Find CamManager.zip and right click on the file. A drop down window will appear and select "Extract All".

4. Another window will pop up asking for a destination to extract the files to, you can usually just keep this as what is defaulted otherwise make sure "Show Extracted files when complete" is checked and press Extract.

5. A folder will show after the extraction is complete and you should see another folder called "CamManager v.1.0.5.6 Current". Double click into this folder. You should now see "CamManager" with a shield logo. Double click CamManager to open the program.

Name	Date modified	Type	Size
 CamManager	6/25/2018 11:42 A	Application	355 KB
 DMT10.dll	6/25/2018 11:42 A	Application extens	34 KB
 dmt10.h	6/25/2018 11:42 A	H File	13 KB
 DMT10.lib	6/25/2018 11:42 A	LIB File	13 KB
 language	6/25/2018 11:42 A	Configuration setti	4 KB
 libusb0.dll	6/25/2018 11:42 A	Application extens	66 KB
 mfc140u.dll	6/9/2016 10:46 AM	Application extens	4,664 KB
 mfcm140u.dll	6/9/2016 10:46 AM	Application extens	93 KB

6. Once you have the program open, connect your camera and login as administrator using the default password of 888888

Troubleshooting:

Q: I have a window says "msvcp140 dll missing".

A: Please go to the following link

<https://www.microsoft.com/en-us/download/details.aspx?id=52685>. Once there select your language and press Download. You will then have a window where you can select two different files. Tick both files and select download. You should now see a pop up to save the two files. Let the files download and once complete run both files one after another. After both files have installed reboot your PC and try to run cam manager. If during the install you might see an option to "Repair", select Repair. Otherwise the keep everything defaulted while installing.
